

Product Designer specializing in workflow-heavy B2B SaaS platforms. Experienced in structuring ambiguous operational problems into scalable systems, reusable interaction patterns, and cross-module product experiences. Specializes in making complex operational workflows feel simple — particularly in construction and enterprise SaaS contexts where user cognitive load is high.

 Experience

Product Designer - Linarc

Sep 2024 - Dec 2025 Chennai, Tamil Nadu

- Led end-to-end design for 6+ interconnected B2B SaaS modules including Safety, Equipment Management, Single & multi-object report generator (editor) , and Checklists.
- Mapped ambiguous operational workflows into documented IA and interaction specs before handoff, reducing mid-development design clarifications across 6+ modules
- Established reusable UI patterns (20+ components) and foundational design logic to support cross-module scalability.
- Facilitated stakeholder workshops to surface conflicting requirements early, aligning product, design, and engineering on feature scope before development began.
- Collaborated closely with engineering to align usability goals with technical feasibility during implementation cycles.
- Managed parallel feature streams while maintaining product-wide interaction consistency.
- Integrated AI-assisted tools into early design workflows to rapidly prototype variations and refine complex interaction patterns.

Selected Projects

GearGuru:	Identified that community validation directly drives purchase confidence — restructured discovery and checkout around peer trust signals, validated with 17 users.
Structured Recovery:	Designed adaptive rehabilitation platform prioritizing cognitive clarity and progressive safety; re-architected dashboard and booking flows across 1.5-year evolution.
Design System:	Built atomic-based framework (24+ components, 220+ variants); defined scalable tokens to improve cross-module consistency.

 Skills

Design:	UX Research, Interaction Design, User Flows, Information Architecture, Wireframing, Prototyping, Design Systems, Component Architecture
Tools:	Figma, FigJam, Miro, Adobe CC (Photoshop, Illustrator), Maze
AI-assisted prototyping:	Cursor, Loveable

 Education

B.Sc Visual Communication — Dr. GRD College (2019–2022)

PG Program in UI/UX Design — ICAT Design & Media College (2023–2024)
